Computer Science Engineering

SUMMER INTERNSHIP

LOGIPROMPT TECHNO SOLUTIONS   Thiruvananthapuram, 2023

Worked on developing Python scripts, building and training ML models, and integrating robotics hardware with software. Gained hands-on experience in NumPy, Pandas, Scikit-learn, and OpenCV. Contributed to automation, testing, debugging, and optimizing code, while collaborating with the team on innovative ML and robotics projects.

WORK EXPERIENCE

DOCME CLOUD SOLUTIONS – SOFTWARE DEVELOPER   **2024–NOW**
                                                                          TRIVANDRUM,
- Develop and maintain dynamic web applications using PHP.
- Build efficient server-side logic and reusable back-end components.
- Design and manage RESTful APIs for seamless system integration.
- Integrate and manage relational databases like MySQL/PostgreSQL.
- Collaborate with frontend teams to align UI with backend functionality.
- Troubleshoot, debug, and optimize existing code for better performance.
- Participate in code reviews to ensure clean, scalable code standards.
- Support deployment and maintenance of software updates.

PROJECTS

LOYALTRI   2024

A modern SaaS-based HRMS platform built to simplify HR operations, from recruitment and onboarding to payroll and analytics. Loyaltri reimagines HR software with AI-driven solutions, real-time insights, and an employee-first approach.

- Built a scalable HRMS SaaS platform for businesses in education, healthcare, and corporate sectors.
- Used React.js for frontend, PHP (CodeIgniter) for backend, and PostgreSQL for database.
- Implemented secure authentication, automated payroll, and digital onboarding.
- Integrated role-based access control and advanced people analytics.
- Designed a responsive and intuitive UI for web and mobile.
- Scaled platform to 5,000+ active users across India and GCC, with offices in Dubai, Kochi, Trivandrum, and Coimbatore.

PUMP2HOME   2023

An on-demand fuel delivery platform that allows users to order fuel anytime, anywhere. This project is a full-stack web application built using MySQL, Laravel, HTML, CSS, and PHP. It ensures secure order management, real-time updates, and seamless customer experience through efficient backend logic and responsive UI.

- Built an on-demand fuel delivery platform.
- Used Laravel, MySQL, PHP, HTML, and CSS for full-stack development.
- Implemented secure authentication and order tracking.
- Added real-time order status updates and notifications.
- Designed a responsive UI for a smooth user experience.
